

Complex Care Services

Human Services South

Human Services South offer the following services co-ordinated by our team of Registered Nurses.

- **Complex Care Plan Development**

This is a specialty area offered by the Skills Institute. We are able to provide high quality and affordable Complex Care Plans based on consultation with key stakeholders. Following the development of the Care Plan, client-specific training is arranged to suit the exact needs of the client and to meet the requirements of Departmental Guidelines.

- **Client-Specific Invasive Procedures Training**

Training and assessment can be provided in areas such as gastrostomy (PEG) management, enteral feeding, bowel management, epilepsy emergency medication etc. All client-specific training is based around a comprehensive Complex Care Plan and all participants must have specific pre-requisite qualifications before enrolling.

- **Infection Control**

The Skills Institute can offer a variety of packages, developed by our unit. These include induction training for new staff, ongoing annual training for experienced staff, and “one-off” workshops to suit the needs of your organisation.

- **Diabetes Management and Blood Glucose Monitoring**

In addition to general diabetes awareness training the Skills Institute can provide client-specific sessions based on the Diabetes Management Plan with competency assessment of skills.

- **Epilepsy Management**

Our epilepsy packages have been developed by an experienced epilepsy educator and are designed to suit all levels of epilepsy management needs from induction training for new support staff through to professional development for experienced workers.
